EDUCATION

Indian Institute of Information Technology, Vadodara

August 2023 – May 2027

Bachelor of Technology in Information Technology - CGPA - 7.94/10

Gandhinagar, India

EXPERIENCE

FullStack Developer Intern

Oct 2026 – Jan 2026

iTSoft Developers

Hybrid

- Developing a large-scale ERP system for colleges and universities serving 5L+ users, supporting role-based workflows for Students, Faculty, and Admins.
- Building the frontend using Angular, Angular Material and Signals following a scalable modular enterprise architecture.
- Implementing ERP modules including Admission, Attendance, Results, Library, Hostel, Fees, and integrating with existing C# APIs for authentication, access control, and enterprise workflows.

Project Intern

Feb 2025 – Jul 2026

Government of Bhilwara, Rajasthan

Hybrid

- Built the system for School – Mid-Day Meal and Attendance System, a production-grade platform automating student attendance, meal counting via AI-based face recognition, using Node, React, ReactNative, PostgreSQL.
- Developed and integrated a Python FastAPI ML microservice using MobileFaceNet (ONNX Runtime) for face detection and recognition, and orchestrated asynchronous ML jobs with Redis/BullMQ for offline-first sync between mobile clients and the server.

PROJECTS

EmPay HRMS – DevOps Pipeline | Docker, Kubernetes, Terraform, Azure, GitHub Actions, Helm

Jul 2025

- Built an end-to-end CI/CD pipeline – GitHub Actions for testing, Docker images tagged with Git SHA pushed to Azure Container Registry via AcrPull managed identity, deployed to AKS using helm upgrade --atomic with automatic rollback on health probe failure.
- Provisioned Azure infrastructure via Terraform (VNet, AKS, ACR, Key Vault); deployed Kubernetes namespace with Frontend (nginx), Backend (Bun/Node.js, HPA 2–5 pods), PostgreSQL StatefulSet (10Gi), and Redis – all secrets from Azure Key Vault via CSI driver, zero plaintext credentials in any file.

SecureVote – Blockchain E-Voting DApp | Solidity, Ethereum, Ethers.js, Hardhat, OpenZeppelin

Nov 2025

- Developed a decentralized e-voting platform using Solidity smart contracts ensuring secure and transparent voting with role-based access control and cryptographic verification.
- Designed immutable voting records on the Ethereum blockchain, enabling transparent audit trails and reducing centralized manipulation risks.

Custom Unix Shell Implementation | C++, Unix System Calls, Process Management

Jun 2025

- Implemented a Unix shell in C++ supporting command parsing, implemented piping, chaining, process handling and auto-completion using Unix system calls.

TECHNICAL SKILLS

Languages: C, C++, JavaScript, Python, Solidity

Full Stack Development: React.js, Next.js, Angular, RxJS, Node.js, Express.js, REST APIs, WebSockets, TanstackQuery

Blockchain: Ethereum, Smart Contracts, Ethers.js, Hardhat, OpenZeppelin

Databases: MongoDB, MySQL, PostgreSQL

DevOps / Cloud: Docker, Kubernetes, GitHub Actions, CI/CD, Linux, Terraform, AWS, Azure, Helm

Tools: Git, GitHub, Postman, Monorepo, Nx

ACHIEVEMENTS

- HackIIIITV 2025 Winner** – Secured 1st place among 50+ teams by building an AI-powered real-time collaborative coding platform. (Apr 2025, IIIT Vadodara)
- Solved 400 DSA problems on LeetCode and GeeksforGeeks, strengthening problem-solving and algorithmic thinking.
